Products Policy

Antivirus

Antivirus for Desktop (Mac and Windows)

Official Product Name

Avast Free Antivirus, Avast Internet Security, Avast Premium Security, Avast Premier, Avast Pro Antivirus, Avast Security Pro, Avast Security for Mac, Avast Premium Security for Mac

Avast Business Antivirus, Avast Business Antivirus Pro, Avast Business Antivirus Pro Plus, Avast Business Patch Management, Avast Business Management Console, Avast Business Antivirus for Mac, Avast Business Antivirus for Linux (collectively as "Antivirus for Desktop")

Core Functionality

The Antivirus for Desktop provides protection against malicious software by performing key tasks, such as pinpointing specific files for the detection of malwares, scheduling automatic scans, and securing your device against malware.

What are Product's Main Features

- •CommunityIQ is a threat monitoring service for Windows and Mac which sends information about a threat detected in your device to our server, so we can observe how the threat spreads and block it. This is vital for the functioning of our Antivirus and our ability to keep your device secure.
- •CyberCapture detects and analyses rare, suspicious files on your Windows. If you attempt to run such a file, CyberCapture locks the file from your PC and sends it to our Threat Lab where it is analysed in a safe, virtual environment. All files are uploaded over an encrypted connection, which means your data is inaccessible to hackers.
- •File Reputation provides a real-time comparison with an up-to-date list of malware databases of executable files sourced from users of Windows who agree to participate in the service. FileRep processes files or their hashed versions to evaluate which are infectious and updating virus databases.
- •Online Security is a browser plug-in which needs to be specifically activated which checks if the site isn't malicious or phishing.

- •Browser Cleanup is a module inside Antivirus for Desktop (Windows) which inspects the browser extensions of most browsers, tries to identify malicious extensions and offers to remove them. Browser Cleanup is on by default.
- •Web Shield scans data that is transferred when you browse the internet in real-time to prevent malware from being downloaded and run on your computer. By default, Web Shield is on and configured to provide optimal protection when switched on.
- •Email Guardian is a cloud-based service which monitors e-mails from supported providers, scans them the minute they hit your inbox and flags them as malicious if they contain a threat. This feature processes for its functionality, products and business improvement personal data, such as e-mail and its content, including attachments. By default, Email Guardian is off. When enabled it provides optimal protection even when your device is switched off.
- •Hack Alerts when enabled, it searches and monitors email addresses associated with your Account for data breaches to alert you when your data has been compromised in a breach and your information is exposed on the dark web. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here.

Personal Data We Process

While using Antivirus for Desktop, we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	Service Provision (36 months) •To monitor service functionality
	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (50 months) •To monitor messaging performance
IP address	Service Provision (36 months) •To detect the approximate location of malicious software. For free Antivirus, IP address is replaced at activation with city/country. For free and paid Antivirus, it

	is a part of malware infection file replaced in 30 days with city/country
Samples, files	Service Provision (36 months) •For protection, detection, analysis, blocking, quarantining and deleting of malicious software
Detections	Service Provision (36 months) •For protection, detection, blocking, quarantining and deleting of malicious software
URLs and referrers	Service Provision (36 months) •For protection, detection, blocking, quarantining and deleting of malicious software
Events and product usage	Service Provision (36 months) •To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product
	In-product Messaging (24 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement •To better understand our users' behavior (50 months)
	 To introduce a new feature or product based on previous experience (36 months)
Email Guardian - Email	Service Provision (seconds) In order to check your email, we download it whole, together with metadata and attachments. We keep it in our systems only during the processing, we don't store it

Email Guardian - Email address of sender	Service Provision (36 months) •For the functionality of malware scanning
	Product and Business Improvement(36 months) •To evaluate senders' reputation
Email Guardian - Subject of emails	Service Provision (4 weeks) •To be able to track users' support requests related to particular emails. Stored together with the user's email address
Email Guardian - Detections	
•hash of the email	
•hash of the userID	
•email subject	Service Provision (36 months)
sender email address	 For the functionality of malware scanning and maintenance
detection type and name	Product and Business Improvement(36 months)Threat statistics and internal analysis
name of the attachments and their hashes	
•country of the user	
Device Data	What we use it for and for how long
	Service Provision (36 months) •For ensuring continuous functionality and breaking down entries in database
Internal online identifiers (GUID, Device ID)	 In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement •To better understand our users' behavior (50 months)
	 To introduce a new feature or product based on previous experience (36 months)

Service Provision (36 months) •To check for compatibility issues in automated crash dumps In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement •To better understand users' behavior (50 months) •To introduce a new feature or product based on previous experience (36 months) Service Provision (36 months) •To set up a proper product language version for Windows In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement •To better understand users' behavior based on approximate location (50 months) •To introduce a new feature or product based on approximate location (36 months) •To introduce a new feature or product based on approximate location (36 months) •To determine how Antivirus should behave (e.g. if it should be activated in Windows Security Centre or not, whether it should run in passive or active mode) Service Provision (36 months) •For formulating rules of how Antivirus should behave in relation to other SW installed (e.g. exceptions in scanning, filtering,		
•To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement •To better understand users' behavior (50 months) •To introduce a new feature or product based on previous experience (36 months) Service Provision (36 months) •To set up a proper product language version for Windows In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem Product and Business Improvement •To better understand users' behavior based on approximate location (50 months) •To introduce a new feature or product based on approximate location (36 months) •To introduce a new feature or product based on approximate location (36 months) •To determine how Antivirus should behave (e.g. if it should be activated in Windows Security Centre or not, whether it should run in passive or active mode) Service Provision (36 months) •For formulating rules of how Antivirus should behave in relation to other SW installed		 To check for compatibility issues in

Product and Business Improvement

- To better understand users' behavior (50 months)
- •To introduce a new feature or product based on previous experience (36 months)

The third-party analytics tools we use for Antivirus for Desktop is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Antivirus for Mobile (Android)

Official Product Name

Avast Mobile Security, Avast Mobile Security Premium (collectively as "Antivirus for Mobile (Android)")

Core Functionality

Antivirus for Mobile (Android) provides people with essential mobile security with added privacy and performance-boosting features. Block malware, check the safety of installed apps, scan public Wi-Fi networks for possible security weaknesses, and locate your phone if it becomes lost or stolen — all with a single app.

What are Product's Main Features

- **Device Scan** scans your device or a specific file for malware apps and files and various types of security vulnerabilities.
- •Wi-Fi Security and Speed Check enables you to scan your network for vulnerabilities, and tests the speed of the network.
- •Web Shield detects and notifies you when accessing a malicious website that could represent a potential security risk for you.
- •Anti-Theft is designed to protect your private mobile data and help you recover your device in case of loss or theft. This feature is off by default. When you choose to turn it on, you can request location on demand from my.avast.com. Anti-Theft is designed to protect data residing on your mobile phone in the event of theft. For Anti-Theft to function, we must collect and store information about your phone and its approved users. We use this data to locate and identify your lost devices. If the phone was stolen, it may block the thief from using the device. The collected data is used to provide you the functionality. Within Anti-Theft there is a Last Known Location premium feature

- which is also off by default. When you activate the feature, we send more frequent location updates to the server to help you track your device's last known location.
- App Locking is a paid feature, which protects your sensitive apps with a PIN, pattern, or fingerprint.
- •App Insights consists of three features: App Usage, Data Usage and App Permissions. App Insights requires your device user permission in order to work and we ask you for this permission (if not granted yet). When you grant the permission, we keep the data from your list of installed apps stored locally in your phone's database. App Usage provides information about how much time you spend using each app. App Permissions allows you to view which permissions are required by each of your installed apps. Data Usage monitors your data consumption and helps you avoid additional charges by notifying you when you approach the limit. This feature requires access to IMEI and IMSI.
- •Boost RAM kills apps running in the background of your device.
- •Clean Junk analyzes the space on your device and displays the amount of storage space that is being used by junk files.
- Photo Vault allows you to protect access to your photos with a PIN code.
- •Hack Alerts when enabled, it searches and monitors email addresses associated with your Account for data breaches to alert you when your data has been compromised in a breach and your information is exposed on the dark web. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here.

Personal Data We Process

While using Antivirus for Mobile (Android), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
	Service Provision (36 months) •To monitor service functionality In-product Messaging (6 months)
	·

	Product and Business Improvement (50 months) •To monitor messaging performance
IP address	Service Provision (36 months) •To detect the approximate location of malicious software. For free Antivirus, IP address is replaced at activation with city/country. For free and paid Antivirus, it is a part of malware infection file replaced in 30 days with city/country
Samples, files	Service Provision (36 months) •For the functionality of malware scanning and analysis
Detections	Service Provision (36 months) •For the functionality of malware scanning
Information concerning URLs of websites visited (malicious and nonmalicious) and referrers (previous page with link to malware-hosting site)	Service Provision (36 months) •For Web Shield feature's detection of malicious websites
	Service Provision (36 months) •To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product
Events and product usage	In-product Messaging (24 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	 Contextual promotional messaging(upsell, cross-promotion)

These are the third-party analytics tools we use for Antivirus for Mobile (Android):

- Google Analytics
- •Google Firebase and Crashlytics Analytics for Android
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our Privacy Policy.

The free version of Antivirus for Mobile (Android) serves relevant third-party advertisements. These are the advertising partners we use for this product:

- Google AdMob
- Amazon
- Facebook Audience Network
- InMobi
- AppLovin
- Unity Technologies
- IronSource

For further information regarding our third-party ads partners, including their privacy policies, please refer to our Consent Policy.

Antivirus for Mobile (iOS)

Official Product Name

Avast Security & Privacy

Core Functionality

Avast Security & Privacy (hereinafter as "Antivirus for Mobile (iOS)") provides protection for your passwords, photos and Wi-Fi. The product consists of several free and paid features, such as Identity Protection and Secure Browsing, which are described in detail below.

What are Product's Features

- •Identity Protection immediately receives a notification if any of your passwords are found leaked online to keep your identity safe. By choice, users can enter an email address and get back feedback on whether or not their credentials have leaked. The functionality also stores email addresses with respect to which no leak was detected to notify users if we learn that their credentials leaked at a later date.
- Photo Vault locks your photos in an encrypted vault and secure them with a PIN, Touch ID, or Face ID so that only you have access to them.
- •Wi-Fi Security automatically scans Wi-Fi networks for vulnerabilities to verify that the network you're connected to is safe. Receive alerts if any risk is detected.
- •Secure Browsing (available only for paid version) protects your privacy by making sure no one can spy on what you're doing online with Secure Browsing VPN feature.

Personal Data We Process

While using Antivirus for Mobile (iOS), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data, if relevant):

Service Data	What we use it for and for how long
Timestamps of your connections for Secure Browsing	Service Provision (36 months) •To manage the number of concurrent active connections, and handle abuse
Dodard Browning	Product and Business Improvement (36 months) •To improve the user's overall experience
The subnet of your originating IP address for Secure Browsing	Service Provision (36 months) •To plan for increased network demand and capacity
IP address of the VPN server you're using for Secure Browsing	Service Provision (36 months) •To troubleshoot our service and plan for new network capacity
Amount of data transmitted for Secure	Service Provision (36 months) •To plan for new network capacity and server improvements
Browsing E.G. 5GB up or down	Product and Business Improvement (36 months) •To improve the user's overall experience
Llear's amail for Identity Protection	Service Provision (36 months) •To send a requested report to you on whether or not their credentials have leaked
User's email for Identity Protection	Product and Business Improvement (36 months) •To improve the user's overall experience

Events and product usage (app metadata, number of identity protection checks, number and result of Wi-Fi scans, error logs and screen flow)

Service Provision (36 months)

 To ensure continuous functionality (installations, versions, updates, settings)

Product and Business Improvement

- •To understand the user's behavior (14 months)
- •To improve the user's overall experience (36 months)

Device Data	What we use it for and for how long
	Service Provision (36 months) •For user support and troubleshooting
	 Product and Business Improvement To understand the user's behavior and product development planning (14 months)
	 To improve the user's overall experience (36 months)
Mobile Security for iOS version E.G. Mobile Security for iOS version 1.2.2	Service Provision (36 months) •For user support and troubleshooting
	Product and Business Improvement •To understand the user's behavior and product development planning (14 months)
	 To improve the user's overall experience (36 months)
MSISDN (Mobile phone number)	Service Provision (30 days) •For white-labeled versions of the app sold through partner carriers serves as unique ID connected with license
	 For customer service purpose to verify that the user contacting customer support has valid and working license for the product

These are the third-party analytics tools we use for Antivirus for Mobile (iOS):

- Google Firebase Analytics and Crashlytics for iOS
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our Privacy Policy.

AntiTrack

Official Product Name

Avast AntiTrack for Windows, Avast AntiTrack for Mac (collectively as "AntiTrack")

Core Functionality

As you browse the web, profiles of your behavior are compiled and linked to you via cookies and fingerprint-based tracking technologies. This data is then shared and sold by analytics and ad-tech firms. AntiTrack removes cookies and masks the device's "fingerprint" to prevent third-parties from identifying you and following your behavior across the web.

What are Product's Features

- AntiFingerprinting stops scripts from fingerprinting the user's device and tracking their browsing behavior across the web. In particular, this feature relies on processing of browser version, hardware data, OS version, OS locale and AntiTrack version.
- Privacy Score provides the user with an evaluation of how private they
 are based on various in-app configurations. In particular, this feature
 relies on processing of browser version, hardware data, OS version,
 OS locale, AntiTrack version, In-app settings (such as features that
 are turned on/off).
- •Clears your browsing history and cookies helps the user manage their browsing history and cookies by allowing them to manually clear them or schedule automatic clearing at their discretion. In particular, this feature relies on processing of browser version, hardware data, OS version, OS locale, AntiTrack version, In-app settings (such as features that are turned on or off).

Personal Data We Process

We process only the following Service and Device Data (in addition to Billing Data for paid version or Account Data if necessary):

Service Data	What we use it for and for how long
Usage Frequency	Service Provision (the earlier lifetime of the account and 6 years) •We collect usage frequency data, such as the amount you use the application, for feature enhancement, customer support and product maintenance

· ·	Service Provision (the earlier lifetime of the account and 6 years)	
Launches	 For product maintenance and customer support 	
License Key	Service Provision (the earlier lifetime of the account and 6 years) •We send back the license key through the application for regulating access to the product, providing customer support, and administering product updates	
Device Data	What we use it for and for how long	
	Service Provision (the earlier lifetime of the account and 6 years) •For user support, troubleshooting, and product development planning	
OS Version	 Product and Business Improvement When developing new features, we adjust the scope of the feature based upon the requirements and the functionality of certain operating systems (48 months) 	
	 To better understand how users' interact with certain aspects (50 months) 	
	Service Provision (the earlier lifetime of the account and 6 years) •To segment updates by location	
OS Locale	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem	
	Product and Business Improvement •In some cases we might not roll out a new feature or product to every demographic, in such a case we may use OS locale to segment this (48 months)	
	 To better understand how users' interact with certain aspects (50 months) 	
Avast AntiTrack version	Service Provision (the earlier lifetime of the account and 6 years)	

 For user support, troubleshooting, and product development planning
In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Product and Business Improvement (50 months) •To better understand how users' interact with certain aspects
Service Provision (the earlier lifetime of the account and 6 years) •For license management
In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Product and Business Improvement (48 months) •To know when to market new features and or products
Service Provision (the earlier lifetime of the account and 6 years) •To ensure continuous functionality
Service Provision (the earlier lifetime of the account and 6 years) •To install the product, provide application updates, customer support and make user experience improvements

The third-party analytics tools we use for AntiTrack is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Battery Saver

Official Product Name

Avast Battery Saver for Windows

Core Functionality

Battery Saver is a tool designed to extend the battery life of your PC by reducing internal and external power demands.

What are Product's Features

•Battery Saver (profiles) creates a power plan profile to apply the predefined set of various settings which shall reduce the amount of power consumed by the PC.

Personal Data We Process

While using Battery Saver, we collect and process the following Service and Device Data (in addition to Billing Data or Account Data if relevant):

Service Provision (up to 12 months)

Service Data What we use it for and for how long

•To monitor service functionality		,
Events and product usage	currently installed	oblems that will not be solved by the product and to offer users a solution
	Product and Business Im •To better understand	provement our users' behavior (12 months)
	 To improve users' overall experience by developing new features or products (up to 12 months) 	
Device Data		What we use it for and for how long
		Service Provision (up to 12 months) •To monitor service functionality In-product Messaging (12 months)
Internal online identifiers (GUID, MIDEX, UUID)		•To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Information concerning device (platform, computer type, vendor, model, brightness, wifi_status, bluetooth_status, battery, capacity, state, lifetime, critical bias, cycle count, voltage, granularity,		Service Provision (12 months) •To check for compatibility issues in automated crash dumps
manufacturer date)		In-product Messaging (12 months)

	 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (12 months) •To better understand users' behavior
	 To introduce a new feature or product based on previous experience
	Service Provision (up to 12 months) •To set up a proper product language version for Windows
Location (country, region, city, latitude, longitude, internet service provider, internet autonomous system)	In-product Messaging (12 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (12 months) •To better understand users' behavior based on approximate location
	 To introduce a new feature or product based on approximate location
Other Avast products/licenses on the device and their status	Service Provision (12 months) •To recognize what features should be enabled or disabled, what product should be installed or uninstalled
	In-product Messaging (12 months)

 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

The third-party analytics tool we use for Battery Saver is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

BreachGuard

Official Product Name

BreachGuard

Core Functionality

Our goal is to enable people to take back their privacy online. Remediate past breaches and minimise the risk of abuse of their data in the future. We aim to provide convenient solutions for everyday life online without sacrificing privacy.

- 1. Enabling users to discover and fix online privacy threats.
- 2. Prevent data collection by companies and data brokers.
- 3. Educating users about privacy and security online.

What are Product's Features

- •Risk Monitor is 24/7 dark web monitoring for leaked personal information. BreachGuard leverages the most comprehensive database of the dark web it detects whether users have been compromised in a breach and their information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here. The feature also has the capability, if you consent, to scan your browser for weak, reused or breached passwords and provides instructions to fix these passwords.
- •Personal info remover submits opt-out requests to data brokers in North America. This feature processes names (first name, middle name, last name), address (street, city, country, state, zip code), phone number, email and Date of Birth (DOB). The reason for this is

- that data broker opt-out forms require some of, if not all of the information to submit a valid opt-out request and verify that you are in fact in their database. As a result, we collect this basic information from you to submit the opt-out requests on your behalf.
- •Privacy Advisor provides updates and guidance related to online privacy, including but not limited to: recent data breaches and guides to optimize your privacy for social media sites and other common services. If you opt-in, this functionality will process your bookmarks and browsing history to improve the quality of content so we can distinguish guides which are relevant to you (we are not processing full urls but we need only the domain name).

Personal Data We Process

While using BreachGuard service, we collect and process data about you and your device in the following situations:

Service Data	What we use it for and for how long
Names (first name, middle name, last name), address (street, city, country, state, zip code), phone number, email and date of birth	Service Provision (6 months) •To send data opt-out requests on your behalf

Cleanup

Cleanup for Desktop (Windows, Mac)
Official Product Name

Avast Cleanup Premium, Avast Cleanup Premium for Mac (collectively as "Cleanup for Desktop")

Core Functionality

Cleanup for Desktop is an ultimate tune-up program which speeds up and cleans your PC (Windows and Mac), updates installed apps, and fixes other problems.

What are Product's Features

Avast Cleanup Premium for Windows:

- Maintenance scans and deletes registry items, shortcuts, system and programs temp or unnecessary files, browser caches, history and cookies.
- Program Deactivators scans and disables installed third-party programs which have background, startup or scheduled tasks.
- •Software, Disk or Browser Cleaner scan and temporarily hide or uninstall third-party programs, deletes unnecessary files from disk or browser history.
- Fix Problems scans and fixes common Windows problems which might put PC at risk (e.g. missing Windows updates, administrative shares on public folders).
- **Disk Doctor** or **Defrag** scans for potential errors and fixes system drive or defrags your system drive.
- Software Updater scans and updates third-party programs and their versions installed on PC.
 Avast Cleanup Premium for Mac:
- Clutter Scan scans and deletes application caches, log files, trash, downloads folder, development junk. It looks for similar data on connected external drives as well. Only data on the amount of KB and cleaned is processed.
- Find Duplicates scans for duplicate files in directories selected by you. Only data on the amount of KB and duplicate files found and cleaned is processed.
- Find Photos scans photos and evaluates their quality and similarity to help you decide which you want to keep. Only data on the amount of KB and photos found and cleaned is processed.
- •Uninstall Apps scans and removes applications and programs for which it is necessary to process app name, size, version and last date of its usage.

Personal Data We Process

While using Cleanup for Desktop, we collect and process the following Service and Device Data (in addition to Billing Data or Account Data if relevant):

Service Data

What we use it for and for how long

Service Data		hat we use it for and for how long
	Se	•rvice Provision (up to 12 months)•To monitor service functionality

	months) •To improve the users' overall experience by developing new features and products
	 To understand/estimate market opportunity for new products and new features

The third-party analytics tool we use for Cleanup for Desktop is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Cleanup for Mobile (Android)

Official Product Name

Avast Cleanup, Avast Cleanup Premium (collectively as "Cleanup for Mobile (Android)")

Core Functionality

Cleanup for Mobile (Android) detects and removes unnecessary files to free up storage space. Equally, it can stop running processes to optimize device performance.

What are Product's Features

- •App Overview allows to browse installed and pre-installed applications, provides functionality to uninstall or stop. In particular, this feature relies on processing device provided stats about other apps. These stats are processed locally (on device) in order to provide the service.
- Media Overview provides an overview of files broken down by type (eg images, audio files, video). This feature does not need any specific data processing outside of operations made locally (on device).
- •Battery Saver allows you to select conditions where desired actions (system settings changes) should be applied by this product. For example one can automatically decrease screen brightness when at home. Location based condition require permission to get location data, however these data are never transmitted from the device and all are processed locally.
- •Cloud Transfers allows you to backup their files to an external cloud storage. We are using Google Drive and Dropbox APIs to do so, e.g. you can login using their Google or Dropbox credentials to establish such connections. Note credentials are not visible to us.

Personal Data We Process

While using Cleanup for Mobile (Android), we collect and process the following Service and Device Data (in addition to Billing Data for paid version):

Service Data	What we use it for and for how long
Identifier of the	Service Provision (36 months)
content (message)	 To monitor service functionality
being delivered	In-product Messaging (6 months)

	 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem 	
	Product and Business Improvement (14 months) •To monitor messaging performance	
	Service Provision (36 months) •Replaced with city/country for delivering geospecific changes to app's configuration (both local or remote)	
IP address	 In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem 	
	Product and Business Improvement (14 months) •To monitor messaging performance	
	Service Provision (36 months) •To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product	
Events and product usage	In-product Messaging (24 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem	
	Product and Business Improvement ■To better understand our users' behavior and users' acquisition (14 months)	
	 To consider roadmap for type of features and products we want to develop in future (36 months) 	
Device Data	What we use it for and for how long	
Online identifiers (GU Device ID (Android ID Hardware ID, Profile I), and stability	
Advertising ID)	To inform users of problems that will not be solved by the currently installed	

	product and to offer users a solution to the detected problem
	Product and Business Improvement ■To better understand our users' behavior (14 months)
	 To recognize reinstalls of the app on the same device (39 months)
	Third-party Ads (not stored after provision) •We process Advertising ID only for IronSource which allows it to place advertisements
	Service Provision (36 months) •To ensure functionalities of the product and its features
Information concerning computer or device (carrier, OS version, OS build number, hardware ID, device model, device brand, device manufacturer, device API level)	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement ■To better understand our users' behavior (14 months)
	 To determine whether a new feature or product should be developed for subset of users (36 months)
	Service Provision (36 months) •Delivering geo-specific changes to app's configuration (both local or remote)
Location (city/country, longitude and latitude)	 Related to Battery Profile feature, as users can set being in a certain location as a trigger to automatically launch a Battery saving profile.
	 In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

	 Product and Business Improvement To better understand users' behavior based on approximate location (14 months) To introduce a new feature or product based on approximate location (36 months)
Applications	Service provision (36 months) •To provide insights, such as usage stats to help identify unused apps (storage cleaning opportunity), drain impact (battery, data) to help identify apps that have significant effect on device resources, or notification stats to help identify "noisy" apps which can be "muted" by links to system settings
	 In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (14 months) •To better understand users' behavior
	Service provision (36 months) •For functionality of our features, providing error messaging
Internet and connection	 In-product Messaging (6 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement •To better understand users' behavior (14 months)
	 To introduce a new feature or product based on previous experience (36 months)

These are the third-party analytics tools we use for Cleanup for Mobile (Android):

- Google Firebase Analytics and Crashlytics for Android
- AppsFlyer

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our Privacy Policy.

The free version of Cleanup for Mobile (Android) serves relevant third-party advertisements. These are the advertising partners we use for this product:

- Google AdMob
- Amazon
- Facebook Audience Network
- InMobi
- AppLovin
- Unity Technologies
- IronSource

For further information regarding our third-party ads partners, including their privacy policies, please refer to our Consent Policy.

Driver Updater

Official Product Name

Avast Driver Updater

Core Functionality

Driver Updater provides scan and potential update or fix of outdated drivers on a users' PC to optimize it for better performance and avoid potential crashes or malfunctions.

Personal Data We Process

While using our Driver Updater services, we collect and process data about you in the following situations:

Service Data	What we use it for and for how long
Identifier of the	Service Provision (12 months)
content (message)	 To monitor service functionality
being delivered	In-product Messaging (12 months)

	•To info	orm users of problems that will not be
	solv	red by the currently installed product and to rusers a solution to the detected problem
		d Business Improvement (12 months) onitor messaging performance
	•To ens	evision (12 months) sure continuous functionality (installations, sions, updates, settings) and map how rs interact with our product
Events and product usage	•To info	Messaging (12 months) orm users of problems that will not be red by the currently installed product and to r users a solution to the detected problem
	Product and Business Improvement (12 months) •To better understand our users' behavior

		Product and Business Improvement (12
		months)To better understand our users' behavior
		 To introduce a new feature or product based on previous experience
Information concerning device (type, vendor, model, manufacturer, version)		Service Provision (12 months) •To check for compatibility issues in automated crash dumps

	In-product Mossaging (12 months)
	 In-product Messaging (12 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (12 months)
	To better understand users' behavior
	 To introduce a new feature or product based on previous experience
Information concerning drivers (driver version, updated date, name, matching device id, driver rank, driver flags)	Service Provision (12 months) •To monitor service functionality
	In-product Messaging (12 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (12 months) •To better understand our users' behavior
	 To introduce a new feature or product based on previous experience
	Service Provision (12 months) •To set up a proper product language version for Windows
Location (country, region, city, latitude, longitude, internet service provider, internet autonomous system)	In-product Messaging (12 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement (12 months)
	 To better understand users' behavior based on approximate location

	 To introduce a new feature or product based on approximate location
Other Avast products/licenses on the device and their status	Service Provision (12 months) •To recognize what features should be enabled or disabled, what product should be installed or uninstalled
	In-product Messaging (12 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

The third-party analytics tools we use for Driver Updater for Desktop is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Family Space

Official Product Name

Avast Family Space

Core Functionality

Avast Family Space is a free mobile application for Android and iOS which keeps your kids safe both online and off with its advanced parental controls and location features.

Personal Data We Process and Features

While using Family Space, we process the following Service and Device Data (in addition to Billing Data and Account Data):

1. Location feature

Parents are able to install the parent's app on their own device and kids app on children's devices. After activation, parents are able to locate their children on demand or set up automatic location alerts based on time or geofencing. Parents have the option to share their own location as well.

Location Data	What we use it for and for how long
Feature	

Child location	 Service Provision (12 months) We collect the child's geolocation GPS coordinates while the app is running in the foreground and background in order to show parents the child's current location, last-known location, and location history
	 Children can also send their location from within the app. For example, Check-In and Pick Me Up are features that send the current location
	 If the child has more than one device paired, location data is only collected from the most recently-used device
	 Product and Business Improvement (12 months) We use this data to train machine learning algorithms to notify parents when a child is in an unexpected place at a given time
Parent location	Service Provision (12 months) •Parents can find a setting to share their location with all family members, other parents or off. The setting is off by default
	 Product and Business Improvement (up to 24 months) We track behavior such as turning this setting on or off, but we don't send location coordinates to third party analytics services
Saved locations	Service Provision (12 months) •Parents can enter a saved location for use in geofencing alerts. They can be alerted when a child enters or exits that saved location, such as home or school
	 Time spent at unsaved locations may be used to recommend a new saved location to parents
	New Product Development (12 months) •Saved Locations may be used in machine learning location anomaly detection. For example, when a child is at a saved location, it may not warrant an alert about unexpected behavior
	 Product and Business Improvement (up to 24 months) We track feature usage data to third parties for analytics, but not names or locations of saved places

2. Activity feature

Parents are able to view the web and app activity from their children's devices. The summary view categorizes connections made by category and the list view shows specific usage information.

Activity Data Feature	What we use it for and for how long
DNS connections, device and app usage	•When the child device is connected to our VPN, the device's IP address and DNS connection information are stored by our partner for 24 hours and then by us for 12 months. We also collect information about whether the device is locked, and whether the screen is on. On Android we also collect device and app usage information from the system. Together these records are used to present a summary and list view of your child's device, web, and app usage
	 We collect the list of installed apps from the child's device to display to parents. We may notify the parent when a new app is installed. We do not share the complete app list with any third parties.
	 We may alert parents to activity that might warrant attention, such as activity during late night hours, accessing objectionable content, or spending a lot of time on a new activity
	 We may also display the same information to child app users for greater transparency
	Product and Business Improvement (12 months) •We use DNS usage history to develop machine learning models which will be used to notify the parent in case of usage anomalies that might warrant attention
	 We use this data to develop machine learning models to predict how much time the child spends in each app, and on each device

The third-party tool which we use for DNS lookup and content blocking is Akamai. For further information regarding this partner, please refer to their Privacy Policy.

3. Controls feature

Parents are able to block access to unwanted apps and websites individually or by category. Parents can pause and restore Internet access on demand.

Controls Data Feature	What we use it for and for how long		
Settings	 Service Provision (the lifetime of account) To store parents' settings of blocked apps and websites in order to synchronize them across devices and apply the rules to children's devices 		
	 We may provide the option to limit the time spent in each app, content category or device 		
	Product and Business Improvement •We track feature usage data to third parties for analytics (up to 24 months)		
Pause internet logs	Service Provision (the lifetime of account) •To store logs of when parents paused and resumed child access to the internet in order to provide customer support and understand usage behavior		
	 Product and Business Improvement We track feature usage data to third parties for analytics (up to 24 months) 		

4. Family setup
As a family app running on multiple devices, configuring your family profile is a required step.

Family Setup Data	What we use it for and for how long
Names and photos	Service Provision (the lifetime of account or profile) •Parents can enter any name and photo they wish for each family member. This information is then displayed on the devices of other family members as well
	 Product and Business Improvement (up to 24 months) We track usage information to third parties for analytics, but we don't send names or photos
Email addresses of secondary parents	Service Provision (the lifetime of account or profile) •The primary parent must enter the email address of additional parents who wish to join the family. This is a security measure taken to ensure that only the invited parent is able to join. Email verification is required of all parents
Roles	Service Provision (the lifetime of account or profile)

	 Each family member is assigned a Child or Parent role, depending on the configuration when family members are invited to join the family
MSISDN (mobile phone number)	 Service Provision (30 days) For white-labeled versions of the app license sold through partner carriers serves as unique ID connected with For customer service purpose to verify that the user contacting customer support has valid and working license for the product

We use third-party analytics tools for additional product insights. You can opt out of this collection in the product settings. These are the third-party analytics tools we use for Family Space:

- Amplitude
- Google Firebase and Crashlytics

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our Privacy Policy.

HackCheck

Core Functionality

HackCheck is a website that allows users to input their email address into a form and check to see if their passwords have been stolen and published on the dark web.

Additionally, HackCheck allows users to register for 24/7 monitoring and alerting which will send the user an email as soon as a password leak has been detected.

Lastly, HackCheck offers some security tips and directions when or if your passwords have been compromised.

What are Product's Features

•Has my password been stolen? which checks the SpyCloud database against the email address the user provided to see if the user's passwords have been leaked and sends an email to the user if the passwords leaked.

•24/7 Automatic Email Alerts which monitors the SpyCloud database and will send the user an email anytime their passwords show up in the SpyCloud database.

Personal Data We Process

If you wish to use the HackCheck, you submit your email address so we can send you alerts about the passwords that have leaked based on results from SpyCloud Database. This email address is used as your account ID and processed by us for the purposes of service provision, cross-promotion of our other products and third-party analytics which help us understand how you use our product. For further information please refer to its privacy policy here The third-party analytics tools we use for HackCheck is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Your email address is stored for as long as you use our service, as it is necessary for us to provide it. You can see all of this data by logging into our Privacy Preference portal. Should you choose to unsubscribe from our email list your email will be deleted and you will not receive any further emails from us.

Management Console

Official Product Name

Avast Business Management Console

Core Functionality

The management console makes it easy to deploy various protection services to multiple devices, manage all devices from one place, mix and match device types, schedule regular scans, and quickly add more devices.

Please note that through this Business Management Console certain settings related to privacy are managed by and information from managed devices is accessible to the administrator of the console. You, as a user, are informed about the role of the administrator during the installation. Businesses are responsible for informing you about this fact and instructing administrators about best practices to ensure users' privacy.

What are Product's Features

•Monitor Device Security uses the console to monitor the health of all managed devices from one place, reviews the number of blocked threats, schedules regular scans, and more.

- Management Dashboard activates devices, adds devices to groups, configures antivirus settings, and views blocked threats from an easyto-read dashboard.
- Master Agent selects a device as the Local Update Server where all updates can be downloaded and saves bandwidth by scheduling and distributing updates to all endpoints in your network when it's convenient.
- Tasks sets up security tasks for all managed endpoints, such as scans, messages, updates, and shutdowns to ensure optimal security for the entire network.
- •**Updates** remotely downloads and distributes virus and program updates to all devices from one console to save time and bandwidth.
- •Notifications receives instant email notifications on any security threats or network issues that need your attention, including outdated antivirus applications, extended device inactivity, and additional device update.
- •Reporting views detailed reports that include blocked threats, task lists, and protected devices, making it simple to improve security and customize protection.
- •Subscriptions Overview lists all valid subscriptions and licenses.

We process only the following Data in addition to Account Data and Billing Data for paid versions of the products you purchased:

Device Data	What we use it for
Internal online identifiers (Device ID)	Service Provision •For ensuring continuous functionality and breaking down entries in database
	Product and Business Improvement •To better understand our users' behavior
	 To introduce a new feature or product based on previous experience
Information concerning computer or device	Service Provision •To check for compatibility issues in automated crash and agent log dumps
	Product and Business Improvement •To better understand users' behavior
	 To introduce a new feature or product based on previous experience

Location, IP and MAC addresses	Service Provision •For admins to have a possibility to localize their devices		
Device status (last connection to Avast)		e Provision For admins to see which devices were active and when and determine the risk profile	
		e Provision To set up a proper product language version	
Location	In-product Messaging •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem		
		ct and Business Improvement To better understand users' behavior based on approximate location	
	 To introduce a new feature or product based on approximate location 		
		e Provision	
	 To set the right language settings 		
Language	-	duct Messaging To send campaigns localized based on users' language	
Service Data		What we use it for	
Identifier of the content (message) being delivered		Service Provision •For ensuring continuous functionality of notifications	
Detections		Service Provision •For administrators to review and analyze what threats were detected in the network	
Applications		Service Provision •To determine which application needs to be updated	
Other Avast products/licenses on the device and their status		Service Provision •For administrators to have an overview of running services and expiration dates	

Internet and connection / Network data / Number of devices on Network		Service Provision •For security prerequisites (e.g. DNS settings check, port restrictions enabling or remote deployment) Product and Business Improvement
		 To introduce a new feature or product based on previous experience
		Service Provision
		 To provide reporting capability for admins and to ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product
		In-product Messaging
Events and product usage		 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
		Product and Business Improvement •To better understand our users' behavior
		 To introduce a new feature or product based on previous experience
Admin and User Data	What w	e use it for
		provision
Name, surname, email address	 To provide access and services, possibility to send reports or notifications about security events or product updates 	
User access rights		provision o provide access to the product
Company Data	V	Vhat we use it for
		ervice Provision
information		 To provide support and to contact the company when needed
Se Business type		•To offer the right solution based on the type of the company

We will process the above mentioned data only as long as necessary for the described purposes. We use rolling deletion periods which means we regularly delete collected data in the given periods starting from the collection of that respective data.

The third-party analytics tools we use for Business Management Console is Google Analytics. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

News Companion

Product Name

Avast News Companion - free browser extension for Chromium-based browsers across all platforms.

Core Functionality and Features

Avast News Companion helps you to check your sources for biases and accurate reporting. It alerts you when sites have a known political bias. Bias categories range from Left to Right, but we'll also tell you about scientific, satiric, and questionable sources.

With this extension you make sure you're reading the facts. Avast News Companion uses algorithms that analyze factual reporting, and check the statements from the articles against fact-checking databases. Based on that you'll get alerted about misleading claims or incorrect news.

We have a full list of the websites where we track reading. Download it here.

Personal Data We Process

While using Avast News Companion, we collect and process the following Service and Device Data:

Service Data	What we use it for and for how long
	Service Provision (30 days) •To display claims related to articles read on selected news websites you're visiting
Selected URLs	•To improve users' overall experience by developing new features or products by analyzing aggregated URLs counts (up to 36 months)

User's feedback(rating, comments)	Service Provision (36 months) •To tell whether the site rating and classification you received are relevant and up-to-date
Comments	Product and Business Improvement (36 months)
	To improve the product or its feature based on the user's feedback
Events and product usage (open extension, rated site, change settings)	Product and Business Improvement (24 months) •To measure user's behavior in UI and how user interacts with the extension
Device Data	What we use it for and for how long
	Service Provision (up to 36 months) •To monitor service functionality and provide users with reading reports
Internal extension identifier (Product and Business Improvement (36 months) •To measure product telemetry, and calculate statistics
Extension information (install	Service Provision (up to 36 months) •To monitor service functionality
Extension information (install source and time, version and campaign ID)	D
	Service Provision (up to 36 months) •To be able to display the correct online content and to improve features
Country	Product and Business Improvement (up to 36 months) •To improve users' overall experience by developing new features or products

The third-party analytics tool we use for News Companion is Mixpanel. For further information regarding our third-party analytics partner, including its privacy policy, please refer to our Privacy Policy.

Omni

Official Product Name

Avast Omni

Core Functionality

Omni provides protection and insights for all connected devices in the home and on the go, through a combined hardware-software solution that easily connects to the existing home router without impacting Wi-Fi performance.

What are Product's Features

- •Home Network Protection enables users to find out which people and what devices are connected to their home network. Omni provides alerts if unusual behavior is detected on any device, and blocks hackers trying to access any device. It connects to the home router, meaning users do not need to replace their router or compromise on their choice of router.
- On-the-go Security extends Antivirus protection seamlessly to mobile devices including Windows, Mac, Android and iOS to secure them outside the home.
- •Parental Controls serve families to filter content and apps that children can access including social media and videos. They can also pause gaming or the internet at any time. Geo-location services help keep track of children with the option to set up alerts for when they leave or arrive at certain places.

Personal Data We Process

Avast Omni integrates features of Family Space, Antivirus for Desktop, Antivirus for Mobile (Android), Antivirus for Mobile (iOS) and Network Security. For further information regarding data associated with Avast Omni please see portraits of those products.

Network Security

In order for Avast Omni to protect devices on user's local network, we collect and process the following Service and Device Data (in addition to Account and Billing Data, if relevant):

Service Data	What we use it for and for how long
Identifier of the	Service Provision (36 months)

Avast One

Avast One for Mobile (Android)

Official Product Name

Avast One Essential, Avast One Individual, Avast One Family (collectively as "Avast One (Android)")

Core Functionality

Avast One (Android) provides a comprehensive set of features protecting users against potential security and privacy threats, and features for optimizing device's performance.

What are Product's Features

 Device Scan scans your device or a specific file for malware apps and files and various types of security vulnerabilities.

- Malware Shields constantly scans all new apps and files being downloaded to the device for malware.
- •VPN feature protects your privacy by encrypting your online communication so no one can spy on what you're doing online. It allows you to pick a specific location to be connected from.
- •Wi-Fi Scan enables you to scan your network for vulnerabilities and encourages you to connect to VPN if any issues are detected.
- •Web Shield detects and notifies you when accessing a malicious website that could represent a potential security risk for you.
- •Personal Identity Scan and Monitoring looks for leaked personal information, whether your data has been compromised in a breach and your information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here
- Performance Scan analyzes the space on your device and displays the amount of storage space that is being used by junk files. Also, it detects apps running in the background of your device that can be stopped in order to free up the device's memory and speed it up.

While using Avast One (Android), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data for paid version):

Service Data	What we use it for and for how long
Identifier of the content (message) being delivered	Service Provision (36 months) •To monitor service functionality

Avast One for Desktop (Windows)

Official Product Name

Avast One Essential, Avast One for Windows (collectively as "Avast One (Windows)")

Core Functionality

Avast One (Windows) provides a comprehensive set of features protecting users against potential security and privacy threats, and features for optimizing device's performance.

What are Product's Features

- Security
 - CommunityIQ is a threat monitoring service for Windows and Mac which sends information about a threat detected in your device to our server, so we can observe how the threat spreads and block it. This is vital for the functioning of our Antivirus and our ability to keep your device secure.
 - CyberCapture detects and analyses rare, suspicious files on your Windows. If you attempt to run such a file, CyberCapture locks the file from your PC and sends it to our Threat Lab where it is analysed in a safe, virtual environment. All files are uploaded over an encrypted connection, which means your data is inaccessible to hackers.
 - File Reputation provides a real-time comparison with an up-to-date list of malware databases of executable files sourced from users of Windows who agree to participate in the service. FileRep processes files or their hashed versions to evaluate which are infectious and updating virus databases.
 - Web Shield scans data that is transferred when you browse the internet in real-time to prevent malware from being downloaded and run on your computer. By default, Web Shield is on and configured to provide optimal protection when switched on.
- •VPN feature protects your privacy by encrypting your online communication so no one can spy on what you're doing online. It allows you to pick a specific location to be connected from.
 - VPN remindersremind users to connect to the VPN based on the type of the visited URL with an option to turn it off.
- •Personal Identity Scan and Monitoring looks for leaked personal information, whether your data has been compromised in a breach and your information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here. The feature also has

the capability, if you consent, to scan your browser for weak, reused or breached passwords and provides instructions to fix these passwords.

Performance

- Disk Cleaner detects and removes junk files from your PC.
- App Optimizer detects apps that slow you down and allows the user to temporarily disable it when not in use.
- Software Updater detects a list of outdated software applications and gets them up-to-date.
- Driver Updater detects outdated drivers and gets them upto-date.

Personal Data We Process

While using Avast One (Windows), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data for paid version):

Service Data	What we use it for and for how long

Avast One for Desktop (Mac)

Official Product Name

Avast One Essential, Avast One for Mac (collectively as "Avast One (Mac)")

Core Functionality

Avast One (Mac) provides a comprehensive set of features protecting users against potential security and privacy threats, and features for optimizing device's performance.

What are Product's Features

Security

- CommunityIQ is a threat monitoring service for Windows and Mac which sends information about a threat detected in your device to our server, so we can observe how the threat spreads and block it. This is vital for the functioning of our Antivirus and our ability to keep your device secure.
- CyberCapture detects and analyses rare, suspicious files on your Mac. If you attempt to run such a file, CyberCapture locks the file from your Mac and sends it to our Threat Lab where it is analysed in a safe, virtual environment. All files are uploaded over an encrypted connection, which means your data is inaccessible to hackers.
- File Shield looks for malware on your device and secures it before it can harm you.
- Ransomware Shield secures your most important folders and your files within.
- Quarantine locks away suspicious and dangerous files found during scans.
- Web Hijack Guard ensures that the websites you visit are legitimate and safe.
- Web Shield scans data that is transferred when you browse the internet in real-time to prevent malware from being downloaded and run on your computer. By default, Web Shield is on and configured to provide optimal protection when switched on.

- •VPN feature protects your privacy by encrypting your online communication so no one can spy on what you're doing online. It allows you to pick a specific location to be connected from.
 - VPN reminders remind users to connect to the VPN based on the network you are connected to with an option to turn it off.
- •Data Breach Monitoring looks for leaked personal information, whether your data has been compromised in a breach and your information is exposed on the dark web. If we identify new breaches we alert you based on the email address you submitted. This is done in cooperation with our partner SpyCloud which checks your credentials against its repository of stolen accounts. For further information please refer to its privacy policy here. The feature also has the capability, if you consent, to scan your browser for weak, reused or breached passwords and provides instructions to fix these passwords.
- •Clear Browsing Data deletes browsing items that can be used by third parties to create a long term record of your browsing history.

Performance

- Disk Cleaner detects and removes junk files from your Mac.
- App Uninstaller shows apps that you have not used in a long time and helps you to completely unistall them.
- Photo Cleaner Scans your photos to find duplicate and low quality pictures and helps you to remove them.

Personal Data We Process

While using Avast One (Mac), we collect and process the following Service and Device Data (in addition to Account Data and Billing Data for paid version):

Service Data	What we use it for and for how long		
	Service Provision (36 months) •To monitor service functionality

IP address	 Service Provision (36 months) To detect the approximate location of malicious software. For free Antivirus, IP address is replaced at activation with 		

	city/country. For free and paid Antivirus, it is a part of malware infection file replaced in 30 days with city/country	
Samples, files	Service Provision (36 months) •For the functionality of malware scanning and analysis	
Detections	Service Provision (36 months) •For the functionality of malware scanning	
Information concerning URLs of websites visited (malicious and non- malicious) and referrers	Service Provision (36 months) •For Web Shield feature's detection of malicious websites	
(previous page with link to malware-hosting site)	 In-product Messaging (with option to opt-out) To recommend user to turn on the VPN for better protection 	
User's email address(es) for Identity leaks scanning and monitoring	Service Provision (36 months) •To send a requested report to you on whether or not their credentials have leaked (one time or regularly depending on users preferences)	
	Product and Business Improvement (36 months) •To improve the user's overall experience	
Timestamps of connections for VPN	Service Provision (35 days) •To calculate peak times of service demand in order to plan the network capacity	
	 To manage the number of concurrent active connections, and handle abuse 	
	•To troubleshoot our service	
Amount of data transmitted for VPN	Service Provision (35 days) •To plan for new network capacity and server improvements	
	 To calculate a free usage quota 	
Events and product usage	Service Provision (36 months) •To ensure continuous functionality (installations, versions, updates, settings) and map how users interact with our product	

	-	o inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	•C	Contextual promotional messaging
•1		t and Business Improvement o better understand our users' behavior and users' acquisition (50 months)
		o improve the user's overall experience by developing new features and products (36 months)
Device Data		What we use it for and for how long
		Service Provision (36 months) •To ensure functionalities of the product and its features
Online identifiers (GUID, Device ID (Android ID), Advertising ID)		In-product Messaging (24 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
		Product and Business Improvement ■To better understand our users' behavior (50 months)
		 To recognize reinstalls of the app on the same device (36 months)
Information concerning device (carrier, OS version, OS build number, Hardware ID, device model, device brand, device manufacturer, device API level)		Service Provision (36 months) •To ensure functionalities of the product and its features
		In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
		Product and Business Improvement

	•To better understand users'
	behavior (50 months)
	 To improve the user's overall experience by developing new features and products (36 months)
Location (city/country, longitude and latitude)	Service Provision (36 months) •Delivering geo-specific changes to app's configuration (both local or remote)
	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	 Delivering geo-specific promotional messaging
	•To better understand users' behavior based on approximate location (50 months)
	 To introduce a new feature or product based on approximate location (36 months)
Installed applications	Service Provision (36 months) •To define rules how Antivirus should behave
	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
Internet and connection	Service Provision (36 months)
	•For security prerequisites In-product Messaging (6 months)

 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem

Product and Business Improvement

- To better understand users' behavior (50 months)
- To introduce a new feature or product based on previous experience (36 months)

Online Security

Official Product Name

Avast Online Security

Core Functionality

Online Security is a browser extension (or plug-in) available for Chrome, Firefox, Edge and Safari. Whenever you visit a website we check if the site isn't malicious or phishing. We are able to provide you with this functionality by processing URLs.

What are Product's Features

- •Antivirus checks the links in search results so the user knows if the page is trying to spread malware.
- Anti-phishing identifies and blocks phishing sites trying to steal your data.
- Anti-tracking blocks annoying tracking cookies that collect data on your browsing activities.
- Reputation Rating allows users to rate websites. Participation is voluntary.
- Marking Search Results shows if the site is safe or not even before the user visits it.
- Advertising Data Collection opts out from ads based on user personal interests. By opting out of interest-based advertising it means the company or companies from which you opt out will no longer show ads that have been tailored to your interests.

Personal Data We Process

While using Online Security, we process the following Service and Device Data:

Service Data	What we use it for and for how long	
URL	Service Provision (24 months) •To check if URLs and the preceding referral domains or URLs (as applicable) are malicious or not to identify its source for threat analysis	
User's feedback (ratings comments)	Service Provision (24 months) •To tell whether the site rating and classification you received are relevant and up-to-date	
ooninento)	 Product and Business Improvement (36 months) To improve the product or its feature based on the user's feedback 	
Usage data		
(open extension, rated site, disabled trackers, change settings, site blocked)	 Product and Business Improvement (24 months) To measure user's behavior in UI and how user interacts with the extension 	
Device Data	What we use it for and for how long	
Internal extension	Service Provision (24 months) •To distinguish unique malware hits and evaluate it in our systems	
: -l +: f: (OLUD)	 Product and Business Improvement (24 months) To measure product telemetry and calculate statistics 	
Information on computer or device (browser, OS)	Product and Business Improvement (24 months) •To obtain usage statistics	
Extension information (installation source and time, version and campaign ID)	Product and Business Improvement (24 months) •To obtain usage statistics, evaluate our messages and perform feature A/B testing	
	Service Provision (24 months) •To detect country specific malware campaigns	
Location / Country	• 10 detect country specific malware campaigns	

	 To measure product telemetry and calculate statistics
Language	Service Provision (24 months) •To make sure we communicate in right language
	Product and Business Improvement (24 months) •To measure product telemetry and calculate statistics
Antivirus Status	Service Provision (24 months) •To being able to turn on Bank Mode which works only when Avast Antivirus is installed and offers to user to open page in a safe sandbox environment on sensitive sites (banking)

Online Security does not process Account or Billing Data.

Passwords

Official Product Name

Avast Passwords, Avast Passwords for Mac, Avast Passwords for iOS and Avast Passwords for Android (collectively as "Passwords")

Core Functionality

Passwords captures, stores in an encrypted storage and automatically fills passwords, credit cards and notes entered by you.

The product consists of several components that differ by platform:

- •Windows Avast Passwords browser extensions for Google Chrome, Mozilla Firefox, Avast Secure Browser and Microsoft Edge are paired with Avast Antivirus
- Mac Avast Passwords browser extensions for Google Chrome, Mozilla Firefox and Safari are paired with standalone Avast Passwords for Mac application
- Mobile standalone Avast Passwords for iOS and Avast Passwords for Android applications

What are Product's Features

• Password Guardian immediately receives a notification if any of your stored passwords are found leaked online to keep your identity safe. The functionality also reports weak and duplicate passwords.

- •Logins and Credit Cards stores your usernames and passwords in an encrypted vault and secure them with a master password or operating system login credentials so that only you have access to them.
- •Secure Notes provides the same encryption as Logins and Credit Cards to any notes added in the application.

Passwords and its components store encrypted information, so that only you as the user who stored this information has access to it. Avast cannot decrypt and read the data.

Unencrypted Service and Device Data are detailed as follows (in addition to Billing Data or Account Data, if relevant):

Service data		What we use it for and for how long
Events and product usage (app metadata, number of identity protection checks, number and result of Wi-Fi scans, error logs and screen flow)		Service Provision (24 months)
Information about user inter web pages	action with	Service Provision (60 days raw data) •To improve quality of login and password change forms recognition
Device Data	What we use	it for and for how long
Random extension identifier	•For use	ision (24 months) rs' support and troubleshooting Business Improvement (39 months) elopment of new features or acts
Operating System Version, Avast Antivirus / Avast Passwords application Version, Browser Version, Extension Version	•For use	ision (24 months) rs' support and troubleshooting Business Improvement (39 months) elopment of new features or acts

Service Provision (24 months)	
Config name / Config AB	 To propagate various configurations based
test ID	on different configuration sets entry
	values

SafePrice

Official Product Name

Avast SafePrice

Core Functionality

SafePrice is a browser extension available for Chrome, Firefox, Edge and Safari. Whenever you visit an online shop or product site, SafePrice will show relevant price comparison and discount coupons.

What are Product's Features

- •Discount coupons and other promotional offers are typically provided by store owners to incentivize purchases. This means that these coupons are relevant to specific domains, and sometimes specific pages only. In order to be able to offer relevant coupons, we need to check the current page URL against a list of available offers.
- Price Comparison looks for specific portions of the HTML code which allows it to identify basic information about the product you are shopping for – product name, SKU and current price. We then compare this information with a database of prices provided by our partners, and offer cheaper prices for the same product where available.

Information about available offers, coupons or cheaper prices is obtained from Ciuvo. We request this content based on the information obtained from the page, your language settings, country level location and search query within SafePrice. Once you click on the offer, your request will be processed by Ciuvo according to its privacy policy.

Personal Data We Process

While using SafePrice, we process the following Service and Device Data:

Service Data	What we use it for and for how long
URL and referrers	Service Provision (36 months)
	 To display discount coupons and price
	comparison offers relevant to the website that you are visiting

Search query	∙lf su	rovision (36 months) ubmitted you, to search for relevant products and discount coupons
Product name and price	•To 0	rovision (36 months) display price comparison offers relevant to the roduct that you are shopping for
User's feedback (ratings, comments)	•To to reference for the refer	rovision (36 months) ell whether the offers you received are elevant and up-to-date, and collect product edback and Business Improvement (36 months) develop new products based on the user's eedback
Device Data		What we use it for and for how long
Internal extension identifier		Service Provision (36 months) •For ensuring continuous functionality and breaking down entries in database Product and Business Improvement (36 months) •To measure product telemetry and calculate statistics
Information on computer or device (browser)		Product and Business Improvement (36 months) •To obtain usage statistics
Extension information (installation source and time, version and campaign ID)		Service Provision (36 months) •To make sure our offers are relevant and product features function as expected Product and Business Improvement (36 months) •To obtain usage statistics, evaluate our marketing campaigns and perform feature A/B testing
Country		Service Provision (36 months)
		I .

	 To make sure our offers are relevant, and collect statistics on SafePrice usage by country
Language	Service Provision (36 months) •To make sure our offers are relevant, and collect statistics on SafePrice usage by language

SafePrice does not process Account or Billing Data.

Secure Browser

Secure Browser for Desktop

Official Product Name

Avast Secure Browser ("Secure Browser for Desktop")

Core Functionality

Secure Browser for Desktop is a product currently offered for PC Windows and for macOS users.

What are Product's Features

- Browser Security & Privacy Center is built in Security & Privacy
 Center which is a curated collection of some key security and privacy
 features, tools and settings, organized into one management console
 making it easier for you to control and manage your online privacy and
 security.
- Anti-Phishing protects you from accessing dangerous websites, such as fake sites, sites that have harmful programs such as adware, spyware, ransomware, viruses, all types of other malware that aim at stealing your information.
- Privacy Cleaner cleans all your browser history, all cookies including 3rd party, cached images, and other tracking scripts with just one click, to ensure that your online activity is private as well as free up space on your device.
- •Private Mode allows you to surf the web privately without saving your browsing history, cookies and other site data or information entered in the websites that you have visited. When browsing with Private Mode you also have Anti-track, Adblock, and Anti-phishing enabled by default to ensure maximum privacy.
- Adblock stops ads from loading on the webpages you visit making your online experience cleaner, faster, safer, and more private. Avast

- Adblock has 3 states (Essential, Balanced and Strict) to allow you to set your own adblocking level in order to customise your online browsing.
- •Anti-Tracking protects you from being tracked or monitored by websites you visit. Anti-Tracking technology blocks tracking scripts and cookies from being loaded on the websites or downloaded to your computer.
- •Anti-Fingerprinting disguises your unique browser fingerprint (i.e. browser type, browser version, extensions, etc.) to help prevent websites from identifying and tracking you without your consent. Anti-Fingerprinting might cause some websites to break as it hides your information that sometimes is needed in order for the website to load (i.e. online banking they rely on your device's information to ensure that it is you).
- •Sync means you can sign into the browser using your Avast ID or Google account. Your browsing data (including bookmarks, history, settings, open tabs, passwords, address, phone numbers, and payment information) will be then backed up and available across all your devices. If you sign into the browser using your Avast ID, we receive information that you sync across devices in encrypted form and we are not able to access it or read it.
- •Built-in VPN (virtual private network) that creates an encrypted connection between your device and the internet, securing your browsing data against eavesdroppers, trackers, and hackers. This VPN feature does not track or store connection timestamps, session information, bandwidth usage, traffic data, IP addresses, or other similar in nature data. Using a VPN will keep you more private and secure but you are still accountable for everything you do online

Personal Data We Process

By default, Secure Browser for Desktop processes locally on your system the following data:

- Browsing history information; for example Secure Browser for Desktop may store the URLs of pages that you visit, a cache of text, images and other resources from those pages. If the pre-rendering feature is turned on, a list of IP addresses linked to those pages may also be stored for some period of time;
- •Name, surname, email or passwords to help you fill out forms or signs in to sites you visit;
- •Permission that you have granted to websites;
- •Cookies or data from websites that you visit;

- Data saved by add-ons;
- •Record of what you downloaded from websites;
- •Any feedback which you decide to share with us.

This data is not sent to our environment. You can manage this data within Secure Browser for Desktop under the "Advanced" section of the Settings page.

If you enable the Sync feature, we will process Sync data in our environment to ensure the sync across your devices.

In our environment we process the following Service and Device Data while using Secure Browser for Desktop:

Service Data	What we use it for and for how long
IP address	 Service Provision (36 months) Replaced with country for delivering geo-specific changes to configuration (both local or remote) For prerendering feature functionality, if
	activated
URLs and referrers	Service Provision (36 months) •If you enable the Anti-phishing feature, for protection, detection, blocking, quarantining and deleting of malicious software
	Service Provision (36 months) •To ensure functionality (installations, versions, updates, settings), map how users interact with the application and improve its design or flows
Events and product usage	In-product Messaging (24 months) •To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	•To better understand our users' behavior (up to 60 months)

	 Findings about product have an effect on the design or layout of the new one (36 months)
User's feedback ratings User's feedback comments	Service Provision (36 months) •To ensure functionality and prevent crashes based on the user's feedback
	Product and Business Improvement (36 months) •To improve the product or its feature based on the user's feedback
	Service Provision (36 month) •To ensure functionality and prevent crashes based on the user's feedback
	Product and Business Improvement (36 month) •To improve the product or its feature based on the user's feedback
Sync data (bookmarks, history, settings, open tabs, passwords, address, phone numbers, and payment information (name on card, card number, expiration date))	Service Provision (3 months) •If you enable the Sync feature to ensure the sync of browser data across devices
Secure Browser VPN events (such as "upgrade now" clicks, "free trial" clicks (called "application event identifier"))	Service Provision (1 month) •Ilf you enable the VPN feature to ensure the functionality (installations, versions, updates, settings), map how users interact with the application and improve its design or flows Product and Business Improvement (1 month) □ If you enable the VPN feature, for product improvements, and development planning as
Device Data What	improvements, and development planning as we aim at developing best-in-class products we use it for and for how long

Secure Browser for Desktop serves advertisements in cooperation with:

- Sovrn
- AdMarketplace
- Mocha
- Amazon
- Priceline

For further information regarding these partners please refer to their privacy policies under the links above.

Secure Browser for Mobile

Official Product Name

Avast Secure Browser for Android and Avast Secure Browser for iOS (collectively as "Secure Browser for Mobile")

Core Functionality

Secure Browser for Mobile is a private mobile browser offered for Android and iOS users.

What are Product's Features

- Browser Security & Privacy Center is built in Security & Privacy
 Center which is a curated collection of some key security and privacy
 features, tools and settings, organized into one management console
 making it easier for you to control and manage your online privacy and
 security.
- Adblock stops ads being shown in your browser using publicly available so called blocking lists. AdBlock usually does not remove ads, it already prevents them from being loaded and thus also speeds up browser experience.
- Anti-Tracking prevents the user from being tracked across websites by avoiding tracking cookies to be created. This is done using publicly available so called blocking lists. Anti-Tracking usually does not remove the tracking cookies, instead it already prevents them from being loaded and created and thus also speeds up browser experience.
- Anti-Fingerprinting prevents the user from being tracked across websites using browser fingerprinting techniques. As fingerprinting itself cannot be prevented or avoided, this feature prevents being

- tracked by altering the digital fingerprint of the users browser or PC combination in a way that third-party sites cannot re-identify it.
- •Built-in VPN (virtual private network) creates an encrypted tunnel between your device and the internet, securing your browsing data against eavesdroppers.
- •Nuke cleans your browser history, cached images, cookies including both first-party and third-party cookies, and other junk with just one click for a specified domain, to keep your activity on that domain private and free up disk space.
- •Remove Site Data cleans your browser history, site cookies, and offline data with the current site with just one click, to keep your activity private and free up disk space.
- Video Downloader enables you to download videos from supported websites to your device.
- Media Vault allocates your files, including those you download during your browsing sessions, to the browser application's encrypted file system. These files are stored on your device and are accessible through the browser application.
- •Secure Mode encrypts your DNS queries, stops ads being shown in your browser, prevents your browsing history from being stored, and removes any tracking cookies (both first-party cookies and third-party cookies) or web cache you pick up during that browsing session.
- •Secure & Private Mode creates an encrypted tunnel between your device and the internet, encrypts your DNS queries, stops ads being shown in your browser, prevents your browsing history from being stored, and removes any tracking cookies (both first-party cookies and third-party cookies) or web cache you pick up during that browsing session.
- PIN Protection secures your device against real world threats from local attacks by locking access to the browser application on your device with a unique code only you know. Your PIN Code is encrypted on disk and is not stored on any servers.
- •Sync means you can sign into the browser using your Avast ID. Your browsing data (including bookmarks, history, settings, open tabs, passwords, address, phone numbers, and payment information) will be then backed up and available across all your devices. If you sign into the browser using your Avast ID, we receive information that you sync across devices in encrypted form and we are not able to access it or read it.

By default, Secure Browser for Mobile processes locally on your system the following data:

- Browsing history information; for example Secure Browser for Mobile may store the URLs of pages that you visit, a cache of text, bookmarks, zones, images and other resources from those pages. If the pre-rendering feature is turned on, a list of IP addresses linked to those pages may also be stored for some period of time;
- Name, surname, email or passwords to help you fill out forms or signs in to sites you visit;
- Permission that you have granted to websites;
- •PIN Code you provide during login to Secure Browser for Mobile;
- Cookies or similar technologies such as pixel tags and web beacons from websites that you visit;
- Records of what you downloaded from websites when using Media Vault.

This data is not sent to our environment. You can manage this data within Secure Browser for Mobile under the "Browsing Mode Settings" and "Data Settings" section of the Security & Privacy Settings page.

If you enable the Sync feature, we will process Sync data in our environment to ensure the sync across your devices.

In our environment we process the following Service and Device Data while using Secure Browser for Mobile (in addition to Account Data):

Service Data	What we use it for and for how long
IP address	Service Provision (per session) •Replaced with country for delivering geo-specific changes to configuration (both local or remote)
	 For prerendering feature functionality, if activated
Events and product usage	Service Provision (36 months) •To ensure functionality (installations, versions, updates, settings), map how users interact with the application and improve its design or flows
	In-product Messaging (24 months)

	 To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	 Product and Business Improvement To better understand our users' behavior (up to 24 months)
	 Findings about product have an effect on the design or layout of the new one (24 months)
Sync data (bookmarks, his settings, open tabs, passwaddress, phone numbers, payment information (nam card number, expiration data	ords, and e on card, e on card,
Device Data	What we use it for and for how long
Online identifiers (GUIDs, Device IDs)	 Service Provision (24 months) To ensure functionality (installations, versions, updates, settings) and to track users subscription trials and purchases
	 In-product Messaging (24 months) To inform users of problems that will not be solved by the currently installed product and to offer users a solution to the detected problem
	Product and Business Improvement •To better understand our users' behavior (24 months)
	 To introduce a new feature or product based on previous experience (24 months)
Information concerning computer or device	Service Provision (36 months) •To check for compatibility issues in automated crash dumps
	In-product Messaging (6 months) •To inform users of problems that will not be solved by the currently installed product

	and to offer users a solution to the detected problem
	Product and Business Improvement •To better understand users' behavior (24 months)
	 To introduce a new feature or product based on previous experience (48 months)
Third-party extensions installed in the browser	Service Provision (36 months) •To define rules of how the Browser should behave in relation to extensions installed (e.g. exceptions in scanning, filtering, notifications, allow-list, deny-list)
	Product and Business Improvement •To better understand users' behavior (24 months)
	 To introduce a new feature or product based on user engagement and preferences (24 months)
Other Avast products/licenses on the device and their status	Service Provision (36 months) •To recognize what features should be enabled or disabled, what product should be installed or uninstalled Product and Business Improvement (24 months)
	•To better understand users' behavior

These are the third-party analytics tools we use for Secure Browser for Mobile:

- •Google Firebase Analytics and Crashlytics for Android
- Kochava

For further information regarding our third-party analytics partners, including their privacy policies, please refer to our Privacy Policy.

Secure Browser for Mobile serves advertisements in cooperation with:

- Sovrn
- ${\color{red} \bullet} AdMark et place$
- Mocha
- Amazon
- Priceline

SecureLine

Avast SecureLine VPN (collectively as "VPN")

We are a leading provider of security and privacy tools and therefore we are deeply committed to protecting and respecting your privacy. Our VPN Policy (together with any other documents referred to in it) sets out the basis on which any data we collect from you, or that you provide to us, will be processed by us.

WebTrails

Official Product Name

WebTrails

Core Functionality

WebTrails is a browser extension (or plug-in) available for Chrome. It provides an alternative view of browsing history with detailed analysis and visualisations of privacy leaks and behaviour patterns. All reports are generated locally in the browser and no data is sent out to any remote servers.

All analyses are performed on-demand, on the device and with the data stored in your browser. No history data for these analyses is stored.

What are Product's Features

- •PII leak detection looks for any personal data (e.g., plaintext names, emails) in URLs visited, based on the Chrome browsing history.
- •Habits generates browsing behaviour habits charts, based on URLs.
- •Social, Search, Video and Locations provides detailed usage reports.

 Location information is derived from the URLs.

Personal Data We Process

While using WebTrails, we process the following Service and Device Data:

Service Data	What we use it for and for how long
URLs and access time stored in your Chrome browsing history	 Service Provision (not stored by us) To generate detailed reports and provide users with insights into their browsing behaviour and habits.

WebTrails does not process Account, Billing and Device Data.
